                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The plasmid pATGFLAG was generated from pSCFVUHH (see AAQ45605) to incorporate a flag-coating sequence 3' to any human VH gene to be expressed contiguously with Hum4 VL. The plasmid pATGFLAG, when digested with XhoI and Nhe I and purified becomes the human cH discovery plasmid contg. Hum4 VL in this SCFV format. pSC49FLAG contains murine antibody CC49VH inserted into sites of XhoI - he purpose of pATDFLAG. It was evaluated for biological activity with the purpose of serving as a positive control for the FLAG assay
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                TGGTACCAGCAGAAACCAGGACAGCCTCCTAAGCTGCTCATTTACTGGGCATCTACCCGG :538
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to producing humanized anti-tumor associated sialylated glycoprotein (TAG-72) antibodies (anti-TAG). The antibodies have binding specificity for the cancer antigen TAG-72. These antibodies have variable regions with VL segments derived from human subgroup IV germline gene and a VH segment (encoded by the VHalphaTAG germline gene) which is capapble of combining with the VL to form a threee dimensional structure having the ability to bind TAG-72. They can be used for the in vivo detection of carcinoma lesions. They can also be used for the in vivo diagnostics. They can also be modified with therapeutic agents e.g. a radionuclide, drug, biological response modifier, toxin or another antibody for the treatment of cancers. The humanized anti-TAG-72 antibodies can reduce harmful anti-mouse antibody hypersensitivity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        181 GAATCCGGGGTCCCTGACCGATTCAGTGGCAGCGGGTCTGGGACAGATTTCACTCTCACC 240

This invention describes novel humanized anti-tumor associated sialylated glycoprotein antibodies (TAG-72) which have cytostatic activity. The antibodies have binding specificity for the cancer antigen TAG-72. They can be used for the in vivo detection of carcinoma lesions. They can also be used for in vitro diagnostics. They can also be modified with therapeutic agents e.g. a radionuclide, drug, biological response modifier, toxin or another antibody for the treatment of cancers. The humanized anti-TAG-72 antibodies can reduce harmful anti-mouse antibody hypersensitivity reactions.

The expression plasmid utilises the beta-lactamase penP promoter, pectate lyase pelB signal sequence and the penP terminator region. Different Ig light chain variable regions can be inserted in the Ncol-HindIII sites, and different SCFV linkers can be inserted in the HindIII-XhoI sites, and different Ig heavy chain variable regions can be inserted in the XhoI-Nhe I sites.
                                                                                                                                                                                                                                                                                                                 Single chain antibody; SCFV1; human subgroup 4 germline antibody; variable heavy; ss.

The invention relates to producing humanized anti-tumor associated sialylated glycoprotein (TAG-72) antibodies (anti-TAG). The antibodies have binding specificity for the cancer antigen TAG-72. These antibodies have variable regions with VL segments derived from human subgroup IV germline gene and a VH segment (encoded by the VHalphaTAG germline gene) which is capaphle of combining with the VL to form a three dimensional structure having the ability to bind TAG-72. They can be used for the in vivo detection of carcinoma lesions. They can also be used for in vitro
Production of humanized anti-TAG-72 antibodies, used for the detection, in vivo imaging and treatment of cancers

This invention describes novel humanized anti-tumor associated sialylated glycoprotein antibodies (TAG-72) which have cytostatic activity. The antibodies have binding specificity for the cancer antigen TAG-72. They can be used for the in vivo detection of carcinoma lesions. They can also be used for in vitro diagnostics. They can also be modified with therapeutic agents e.g. a radionuclide, drug, biological response modifier, toxin or another antibody for the treatment of cancers. The humanized anti-TAG-72 antibodies can reduce harmful anti-mouse antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     418

                                                                                                                                                                                                                                           The plasmid pATGFLAG was generated from pSCFVUHH (see AAQ45605) to incorporate a flag-coating sequence 3' to any human VH gene to be expressed contiguously with Hum4 VL. The plasmid pATGFLAG, when digested with XhoI and Nhe I and purified becomes the human chi discovery plasmid coneg. Hum4 VL in this SCFV format. pSC49FLAG contains murine antibody CC49VH inserted into sites of XhoI - NheI purpose of pATGFLAG. It was evaluated for biological activity with the purpose of serving as a positive control for the FLAG assay
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ouery Match 92.6%; Score 314; DB 14; Length 1359; Best Local Similarity 95.6%; Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                       1 gacatccagttgacccagtc......ggaccaaggtggaaatcaaa 339
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 4

Patent No. US2020137897A1

GENERAL INFORMATION:

APPLICANT: STEVENS, Fred J.

APPLICANT: STEVENS, Fred J.

APPLICANT: RAFFEN, MARIANNE

TITLE OF INVENTION: OPTIMUM RECOMBINANT ANTIBODY PRODUCTION

FILE REFERENCE: 051583/0224

CURRENT APPLICATION NUMBER: US/09/274,163E

CURRENT FILING DATE: 1999-03-22

PRIOR PRILING DATE: 1995-01-17

NUMBER OF SEQ ID NOS: 16

SOFTWARE: Patentin version 3.1

SEQ ID NO 3

LENGTH: 343
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       85.8%; Score 291; DB 11; Length 343;

Patent No. 5990297
GENERAL INFORMATION:
APPLICANT: Saiko HOSOKAWA et al.
TITLE OF INVENTION: HUMAN MONOCLONAL ANTIBODY SPECIFICALLY
TITLE OF INVENTION: BINDING TO SURFACE ANTIGEN OF CANCER CELL MEMBRANE
NUMBER OF SEQUENCES: 42
CORRESPONDENCE ADDRESS:
ADDRESSEE: Wenderoth, Lind & Ponack, L.L.P.
                                                                                                                                                                                                                                                  1 GACATCGTGATGACCCCAGTCTCCAGACTCCCTGGCTGTGTCTCTGGGCGAGAGGGCCACC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            US-064-50-363-4

JSEQUENCE 4. Application US/08450363

Patent No. 6436434

GENERAL INFORMATION:

APPLICANT: Saiko HOSOKAWA

APPLICANT: Tobitaki TAGAWA

APPLICANT: No. 6436434iniko ITO

CITTLE OF INVENTION: Cell Membrane

NUMBER OF SEQUENCES: 42

ADDRESSEE: Wenderoth, Lind & Ponack

STATE: 0005

CONBUTER: BOS Fifteenth Street, N.W., #700

CITY: Washington

STATE: Diskette, 5.25 inch, 500 kb

COMPUTER: IBM Compatible

OPERATING SYSTEM: MS. 2006

SOFTWARE: WordPerfect 5.1

CURRENT APPLICATION NUMBER: US/08/450,363

FILING DATE: MAY 25, 1995

PRIOR APPLICATION NUMBER: 08/360,125

FILING DATE: December 20, 1994

PRIOR APPLICATION NUMBER: 07/905,534

FILING DATE: June 29, 1992
